

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer and B.Tech Computer Science student (CGPA: 9.13/10) at Brainware University with hands-on production experience building and deploying MERN stack applications. Proficient in REST API design, JWT authentication, role-based access control, and scalable system design, with practical exposure to CI/CD pipelines, Git version control, and cloud deployments. Seeking an SDE Intern or Full Stack Engineering internship role at a product-based company to deliver high-impact, scalable software solutions.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, C++

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST API Design, Microservices

Databases: MongoDB, PostgreSQL (Supabase), Redis

Auth & Security: JWT Authentication, RBAC, Clerk

Cloud & DevOps: Docker, Vercel, Render, CI/CD Pipelines, Linux

Tools: Git, GitHub, Postman, VS Code, Agile, Unit Testing

CS Fundamentals: DSA, OOP, DBMS, Computer Networks, System Design, Scalability

EXPERIENCE

Junior Full Stack Developer — Krishlabs

March 2026 – Present

- Engineered and maintained 2 production web applications using the MERN stack, serving 200+ live users with consistent uptime across Vercel-hosted CI/CD deployments.
- Designed RESTful APIs with JWT authentication and RBAC, reducing unauthorized access incidents to zero across both applications.
- Built 15+ reusable React components with Tailwind CSS, accelerating UI development velocity by ~40%.
- Managed Git version control workflows including branching, pull requests, and code reviews across an Agile team.
- Improved application performance via code splitting and lazy loading, reducing average page load time by ~30%.

PROJECTS

Job Portal Application — Job Pilot

Feb 2026 – Apr 2026

Tech: React.js, Tailwind CSS, Supabase (PostgreSQL), JWT, RBAC, Clerk, REST APIs, Vercel

github.com/raj-sarkar123/job-pilot

- Engineered a full-stack job portal with dual-role authentication (recruiter and candidate) using JWT and Clerk, supporting 100+ concurrent user sessions.
- Designed and implemented RBAC with Supabase (PostgreSQL) covering the full job lifecycle — posting, candidate search, and status management — via 12+ RESTful API endpoints.
- Deployed on Vercel with CI/CD pipeline, achieving ~99% uptime across production releases.

NutriScanAI — AI-Powered Food Recommendation System

Jan 2026 – Mar 2026

Tech: React.js, Node.js, Express.js, Supabase, Redis, JWT, AI Integration (Groq API), Vercel, Render

github.com/raj-sarkar123/nutriscan-ai

- Built a scalable AI-powered nutrition platform delivering personalized food recommendations, AI-based food analysis, and real-time macro tracking for 150+ registered users.
- Implemented JWT authentication, OTP email verification, and Redis-based session caching, reducing repeated database queries by ~35%.
- Deployed frontend and backend independently on Vercel and Render using CI/CD workflows with a fully responsive React SPA.

Event Intelligence and Data Aggregation System

Nov 2025 – Jan 2026

Tech: React.js, Node.js, Express.js, MongoDB (Mongoose), Cheerio, Axios, Vercel, Render

github.com/raj-sarkar123/event-intelligence

- Built a full-stack web scraper aggregating event data via scheduled cron jobs, reducing manual data collection effort by ~80% and enabling near-real-time discovery.
- Implemented error handling, retry logic, and unit testing for scraping jobs, achieving >95% successful data fetch rate across all external sources.
- Designed a MongoDB-backed REST API layer with Mongoose ODM serving aggregated data to a React frontend, supporting retrieval for 500+ events.

LifeBridge — Organ Donation Management System

Aug 2025 – Oct 2025

Tech: *React.js, Node.js, Express.js, MongoDB, TypeScript, Vercel, Render* github.com/raj-sarkar123/lifebridge

- Developed a full-stack organ donation platform connecting donors, recipients, and hospitals, processing 200+ simulated donor-recipient matches during testing.
- Designed RESTful APIs and role-based dashboards for organ request management and donor registration using JWT-secured Node.js/Express.js microservices.
- Collaborated in a 5-member Agile team using Git and GitHub for branching, code reviews, and incremental feature delivery.

ACHIEVEMENTS

Smart India Hackathon 2025

Developed an Automated Compliance Checker for Legal Metrology Declarations on E-Commerce Platforms using web technologies and AI-based document analysis, competing among national-level teams.

Nexathon Campus Hackathon (Online) — 48-hour

Engineered a full-stack Organ Donation System under a 48-hour constraint with a cross-functional team, delivering a production-ready MVP with REST APIs and a responsive UI.

Competitive Programming — LeetCode

Solved 200+ problems with focus on arrays, strings, linked lists, stacks, queues, trees, graphs, and dynamic programming.

CERTIFICATIONS & TRAINING

MERN Full Stack Development | Euphoria GenX Training Program

Aug – Oct 2025

Project-oriented full-stack training covering React.js, Node.js/Express.js, MongoDB, REST API design, Git, and Vercel deployment.

AI Track Internship | Samsung Innovation Campus

Sep – Nov 2025

Intensive ML/DL training in Python; completed a capstone AI application integrating data preprocessing, model training, and inference pipelines.

EDUCATION

Brainware University, Kolkata — B.Tech, Computer Science & Engineering

2023 – 2027

CGPA: 9.13 / 10.0

Parulia K. K. High School — Higher Secondary (PCBM)

2023

Percentage: 82%
